Hardware Security

What is the best way to protect data which you have on an external HDD against unauthorized access? The IB-Safe226 comes with hardware encryption according to AES 256. AES is the Advanced Encryption Standard. The encryption is based on the chipset and is activated and deactivated with a physical key. Thus there is no password that you could forget. Only a person who has the physical key as well as the enclosure can access the HDD to read or write.

The perfect external enclosure for confidential and classified data.

USB 2.0 cable Y-Typ

If one USB cable does not provide enough power to start the hard drive, please also connect the second USB on the Y-cable.
